Train Deploy Use in Transformers

Edit model card

GPT-2

Test the whole generation capabilities here: <https://transformer.huggingface.co/doc/gpt2-large>

Pretrained model on English language using a causal language modeling (CLM) objective. It was introduced in [this paper](#) and first released at [this page](#).

Disclaimer: The team releasing GPT-2 also wrote a [model card](#) for their model. Content from this model card has been written by the Hugging Face team to complete the information they provided and give specific examples of bias.

Model description

GPT-2 is a transformers model pretrained on a very large corpus of English data in a self-supervised fashion. This means it was pretrained on the raw texts only, with no humans labelling them in any way (which is why it can use lots of publicly available data) with an automatic process to generate inputs and labels from those texts. More precisely, it was trained to guess the next word in sentences.

More precisely, inputs are sequences of continuous text of a certain length and the targets are the same sequence, shifted one token (word or piece of word) to the right. The model uses internally a

https://huggingface.co/models?pipeline_tag=text-generation : the predictions for the token 1 only uses the inputs from 1 to 1 but

How to use from the Transformers library

```
# Use a pipeline as a high-level helper
from transformers import pipeline

pipe = pipeline("text-generation", model="gpt2")

# Load model directly
from transformers import AutoTokenizer, AutoModelForCausalLM

tokenizer = AutoTokenizer.from_pretrained("gpt2")
model = AutoModelForCausalLM.from_pretrained("gpt2")
```

Quick Links

- Read model documentation
- Read docs on high-level-pipeline
- Read our learning resources

Replication of Inference API

OSError: gpt2 does not appear to have a file named config.json. Checkout 'https://huggingface.co/gpt2/None' for available files.

OutOfMemoryError: CUDA out of memory despite available GPU memory
